

The Partnership for Clean Competition (PCC) provides grants and Ph.D. Fellowships for anti-doping research. Our goal is better detection and deterrence of banned substances in sport.

We fund Ph.D. investigators three times each year with a four-month decision turnaround. The average award is \$202,000 USD. Existing and new projects in other fields may provide indispensable knowledge for the field of anti-doping in professional sports and are eligible for PCC support.

Grant Quick Facts:

- **Three grant deadlines annually: Pre-applications due March 1st, July 1st, November 1st. Full applications due one month later.**
- **Investigators worldwide may apply**
Fellowships for new PhDs are \$75,000 USD/year (1-3 years)
- **Analytical and Social Science projects meeting our research priorities are eligible**
- **Micro-grants for less than \$75,000 USD and six months in duration are accepted year-round**

About the PCC:

Our mission is to advance knowledge in the anti-doping sphere through grant funding in order to enhance current anti-doping technologies and policy.

Since 2008 we have awarded more than \$26M to this end. In addition to our grants and fellowships, we provide micro-grants year-round (<\$75,000) for projects gathering preliminary information or solving an acute anti-doping problem. Our application and additional information can be found via CleanCompetition.org.

We have a cycle closing soon, with pre-applications due on Sunday, March 1st. The pre-application is a quick process designed to gather high-level details about the proposed project. If accepted, researchers will have until April 1st to submit full applications. The subsequent cycles for pre-applications are July 1st and November 1st.

If you have any questions about the PCC or the application process, you may email the Executive Director, Michael Pearlmuter (Michael.pearlmutter@cleancompetition.org).
